@Veda Dentistry and*

Thank You!

You are the Best!

We would like to thank the following patients for recommending us to someone in the month of August

Mrs. Niti Jain
Mr. Chintan Thakkar
Mr. Rishabh Goel

Two very simple ways to protect kids' teeth from cavities

1. DENTAL SEALANTS

- Sealants are thin resin coatings applied on the chewing surfaces of back teeth.
- Back teeth contain deep pits and grooves which are difficult to clean. They harbour bacteria which cause decay of teeth.
- Dental sealants seal these grooves and prevent decay.
- Its best to get teeth sealed as soon as they come out (6-7 years & 12-13 years).

2. FLUORIDE THERAPY

- Fluoride is a naturally occurring mineral which makes the outer layer of teeth strong and prevents decay.
- In office fluoride therapy is a very simple process, fluoride gel is applied over teeth for a few minutes.
- Fluoride gets absorbed into teeth and makes teeth more resistant to decay.
- This therapy can be repeated after every 6 months.
- All children over the age of 3 years should get this preventive procedure done.

PATIENT OF THE MONTH

Advay is our 5-Star patient this month. He is a very happy and calm child and gets his treatment done very patiently. He follows home care instructions thoroughly. Advay's parents understand that even milk teeth need treatment.

OFFER OF THE MONTH

CAVITY FREE KIDS

Help in making your child cavity free
Preventive procedures at 50%.

Topical Fluoride Application and Pits and
Fissure Sealants on all 4 molars for
Rs ~~5000~~ Rs 2500/- only

Confident and younger looking face in Just 15 minutes! - Dermal Fillers

WHAT ARE DERMAL FILLERS?

Dermal fillers are gels injected beneath the skin's surface to smooth wrinkles and add volume and contour.

HOW DO THEY WORK ?

The products are composed of stabilized hyaluronic acid (HA) which occurs naturally in the cells of the skin.

It helps hydrate and adds volume to the skin. It is naturally broken down by our own bodies.

WHAT DOES THE PROCEDURE ENTAIL ?

The procedure is simple and straight-forward, involving a few tiny injections directly into the skin, and takes between 15-30 minutes.

HOW SOON WILL THE RESULTS BE SEEN AND HOW LONG WOULD THEY LAST ?

Results are seen instantly after the treatment, although this gradually improves over the course of the following 2-4 weeks.

Results can last between 9-18 months although results can be maintained over a long period of time through regular repeated treatments.

ARE THESE FILLERS SAFE ?

In general, dermal fillers are considered very safe. The most common reactions are redness, swelling, bruising, itching, and tenderness which subsides within 1-7 days.

Hyaluronic acid (HA) is a substance which occurs naturally in the cells of the skin, thus there is a very rare risk of allergic reactions.

Fresher face, less tired looking eyes

Say bye bye to wrinkles and folds on skin

Cheek lift, defined cheek bones and longer face

Longer, more sculpted, youthful face

WHAT AREAS CAN DERMAL FILLERS BE USED FOR ?

- To replace the volume and contour lost from the face and restore the structural support, giving a more youthful appearance.
- The lips are injected to improve their shape, size, symmetry and proportion.
- An underdeveloped chin or nose may be injected to make it appear more projected and proportionate.
- Resculpting of the jaw line by lessening the effect of sagging.

DR. VEENU JINDAL

Skin and hair specialist
MBBS- Maulana Azad Medical College, Delhi
MD- Dermatology, Gold Medalist, B.J. Medical College & Civil Hospital, Ahmedabad.
SCE Dermatology- Royal College of Physicians, London.

Team News

Welcome our new Associate Dentist: Dr. Gunisha Shah. Dr. Gunisha did her graduation from Subharti Dental College, Meerut. She is a trained classical singer and takes special interest in treating under-privileged children.

We celebrated the birthday of our wonderful front desk manager on 24th August with a Team Lunch.
